

A row of red shopping carts in a supermarket aisle, viewed from a low angle, receding into the distance. The carts are arranged in a single file, and the perspective creates a strong sense of depth. The floor is a light-colored, polished concrete.

Supermarket Delta

Q1 2019 Performance Data and Analysis

By Caroline Lau Campbell, Student ID #25419552

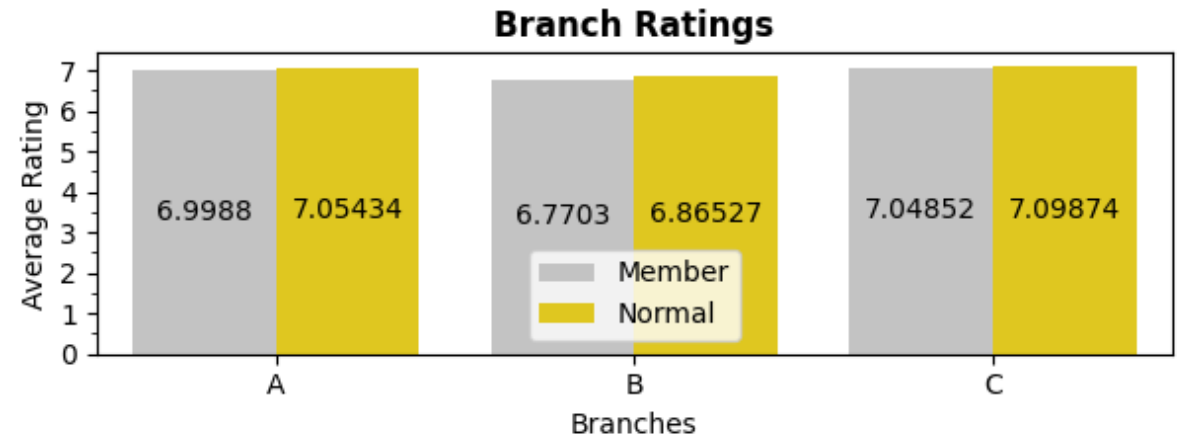

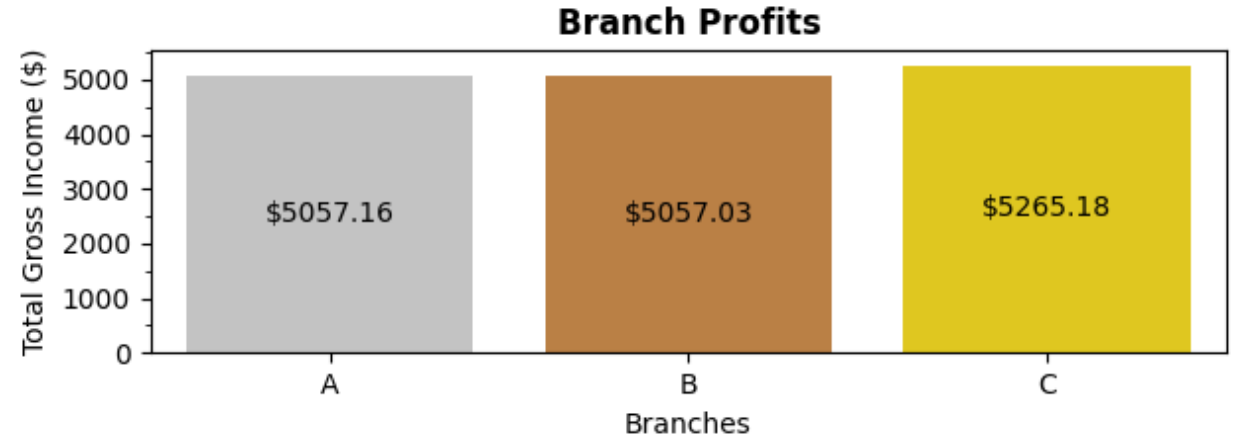

Q1 2019 – Quick Facts

- Supermarket Delta had 1000 customers generating \$15379.37 profit.
- 5510 items were sold, across 3 branches.
- 501 customers held store membership.
- 501 customers were female.
- E-wallet was the most popular payment type.
- Best-selling product lines were Food and Fashion.

Top Store – Nay Pyi Taw

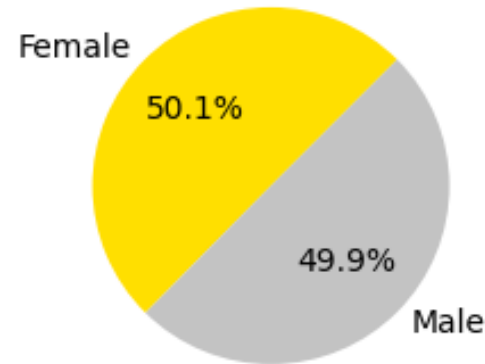

- In Q1 2019, Nay Pyi Taw (Branch C) was the best performing store.
- It outperformed the other stores (Branch A, Yangon; and Branch B, Mandalay) by over \$200.
- Nay Pyi Taw (Branch C) was the highest rated store across all customer types.

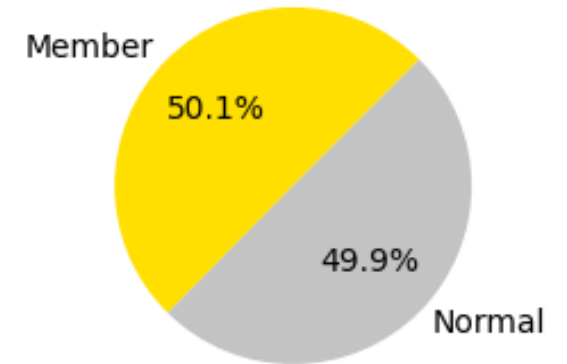

Customer Demographics

- Footfall is broadly equal across all 3 stores.
- About 50% of customers are female.
- About 50% of customers are store members.
- Credit cards are the least popular payment method.

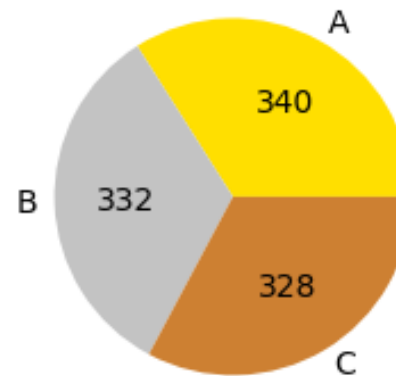

Genders

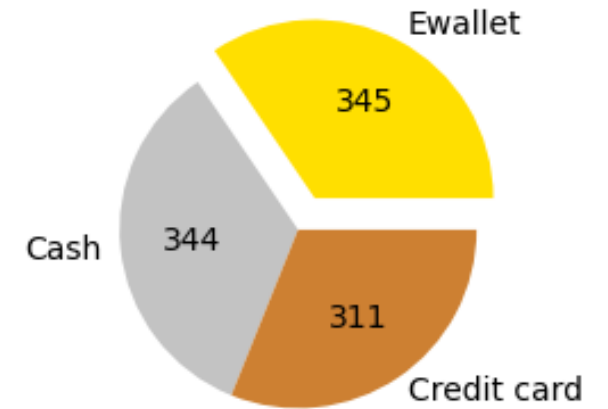

Membership

Store Footfall

Payment Methods

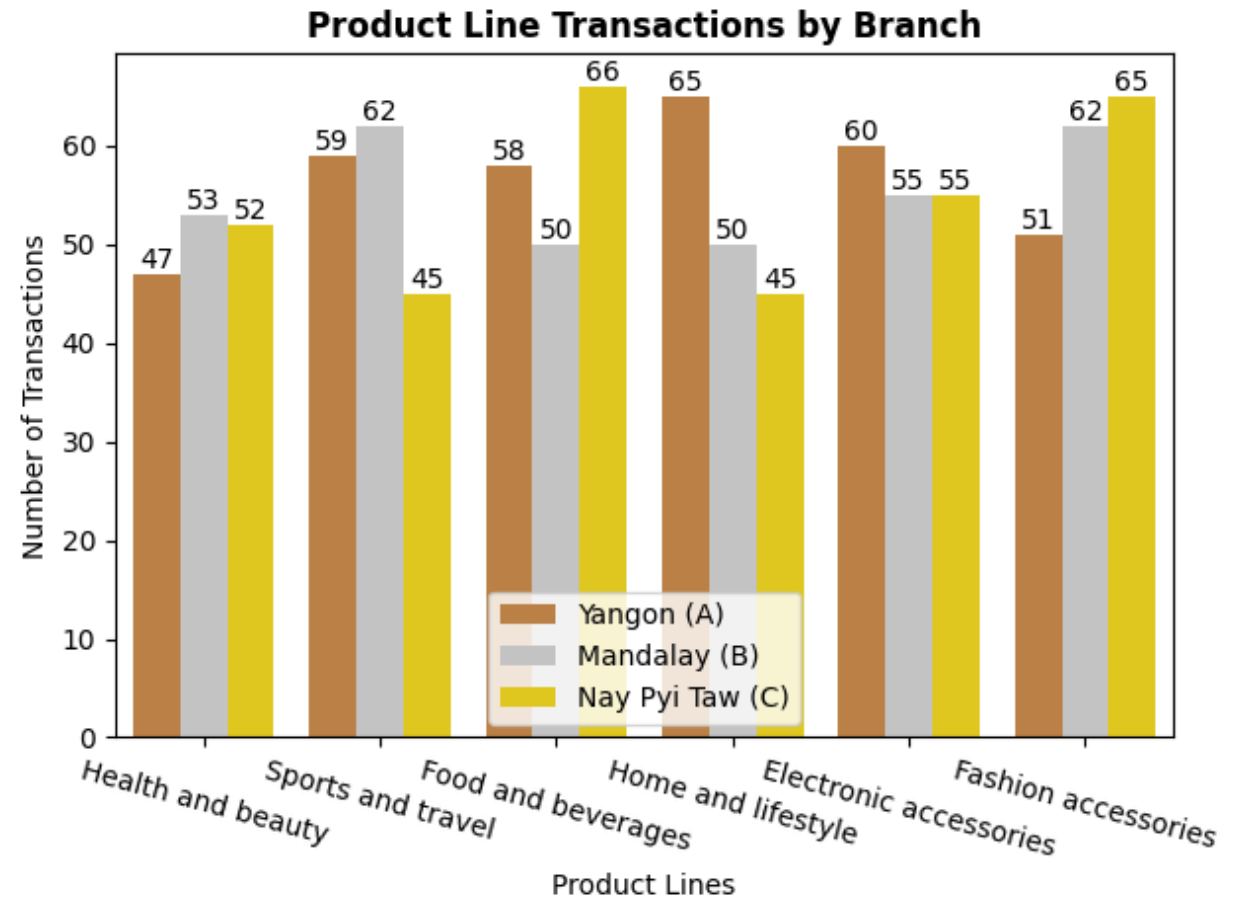

Most Valuable Customers

- Females bought the most items and generated the most profit per transaction; \$15.96 (female) versus \$14.80 (male).
- Members generated the most profit per transaction – a difference of 45 cents.
- Female members generated more profit than male non-members - a difference of \$1.55.

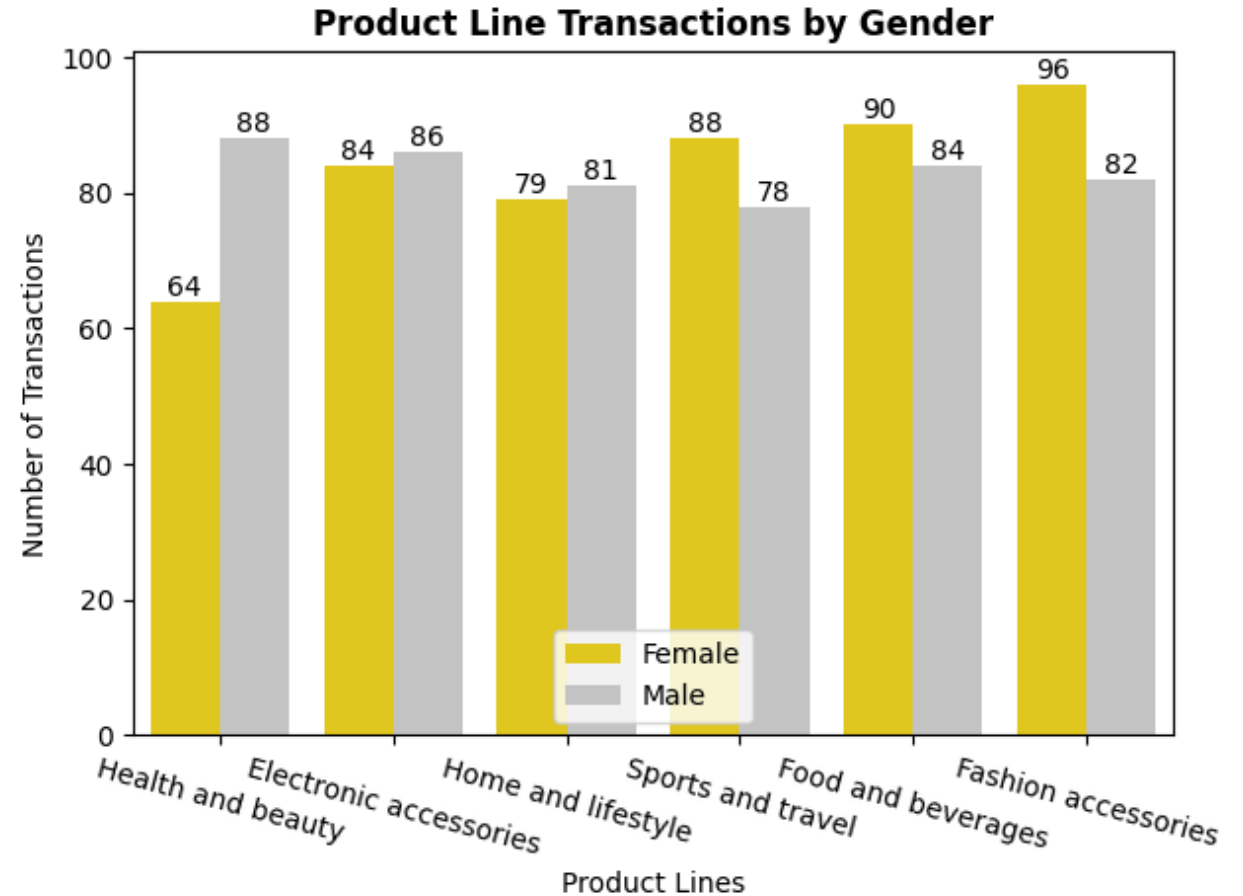

Product Line Popularity

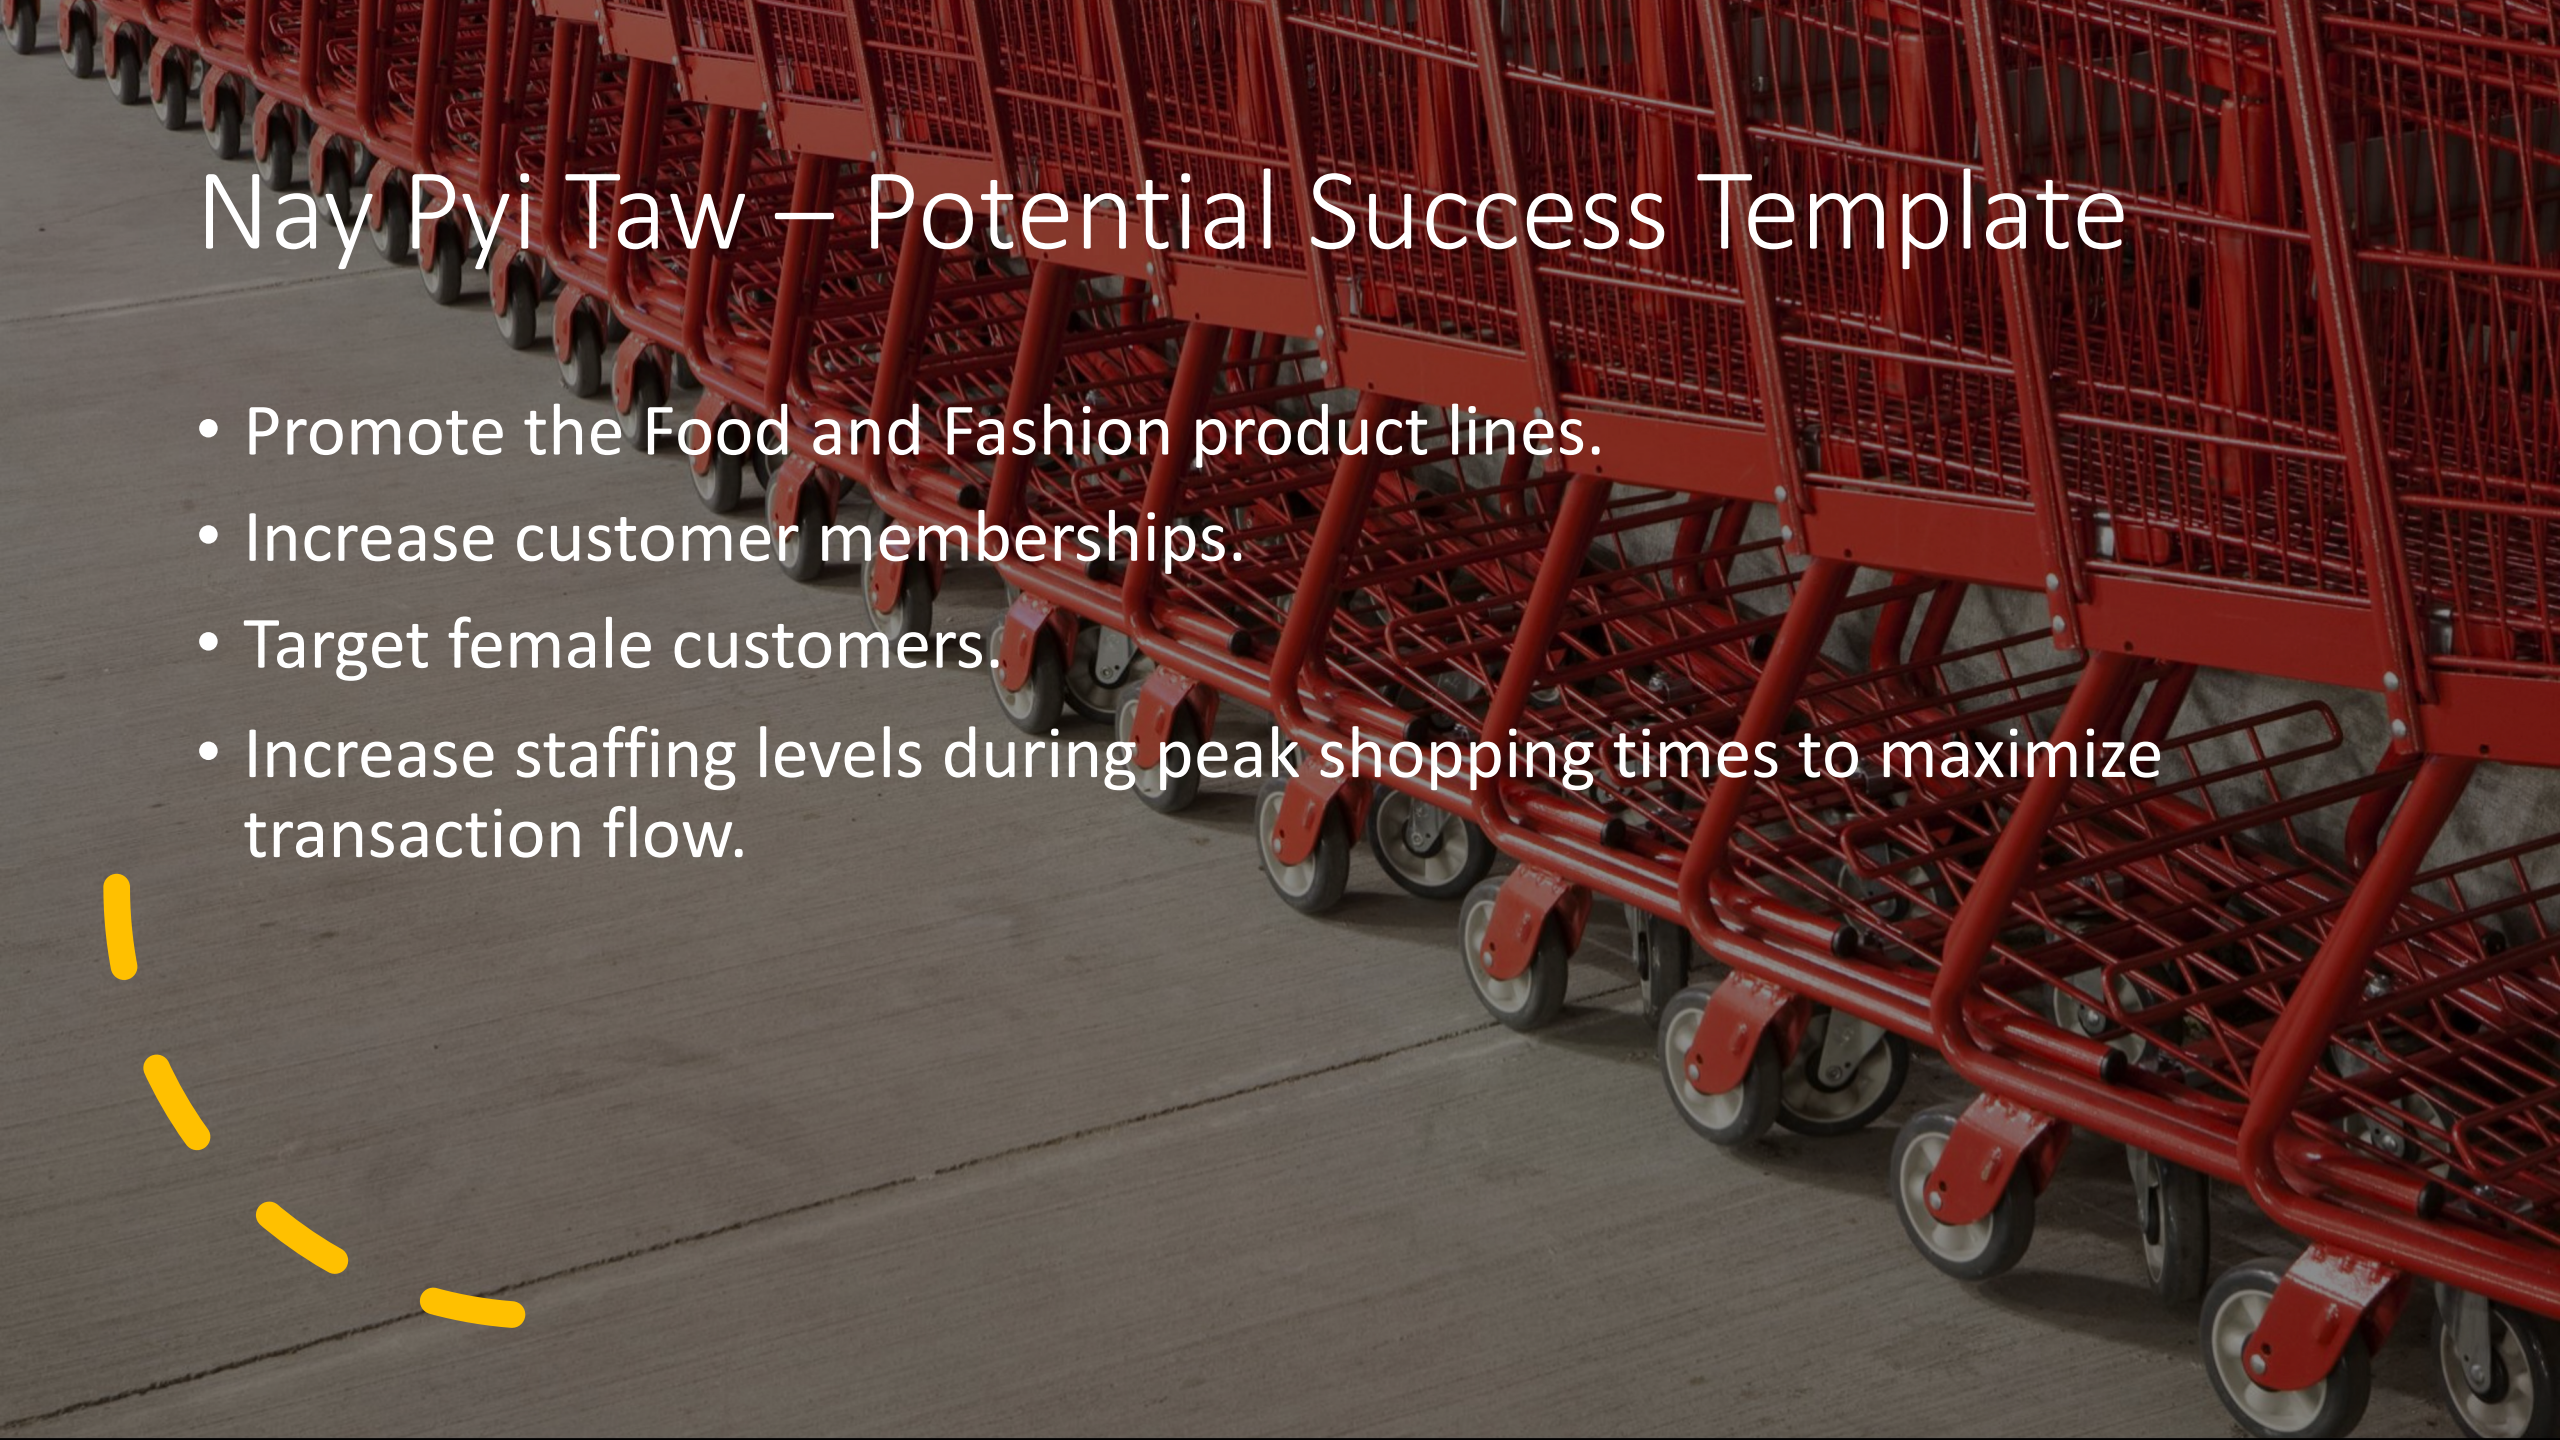

- Food and Fashion were the most popular product lines at the most successful store, Branch C.
- It is notable that the weaker performing stores did not replicate this product line popularity.
- Branch A focused on Home and Branch B focused on Fashion and Sports.

Product Line Popularity

- Females mostly bought Food and Fashion products
 - Food and Fashion were the bestselling product lines at the top performing store.
- Males mostly bought Health and Electronic products.
 - Health underperformed across all stores.
 - Neither Health nor Electronics was the most popular product line at any store.

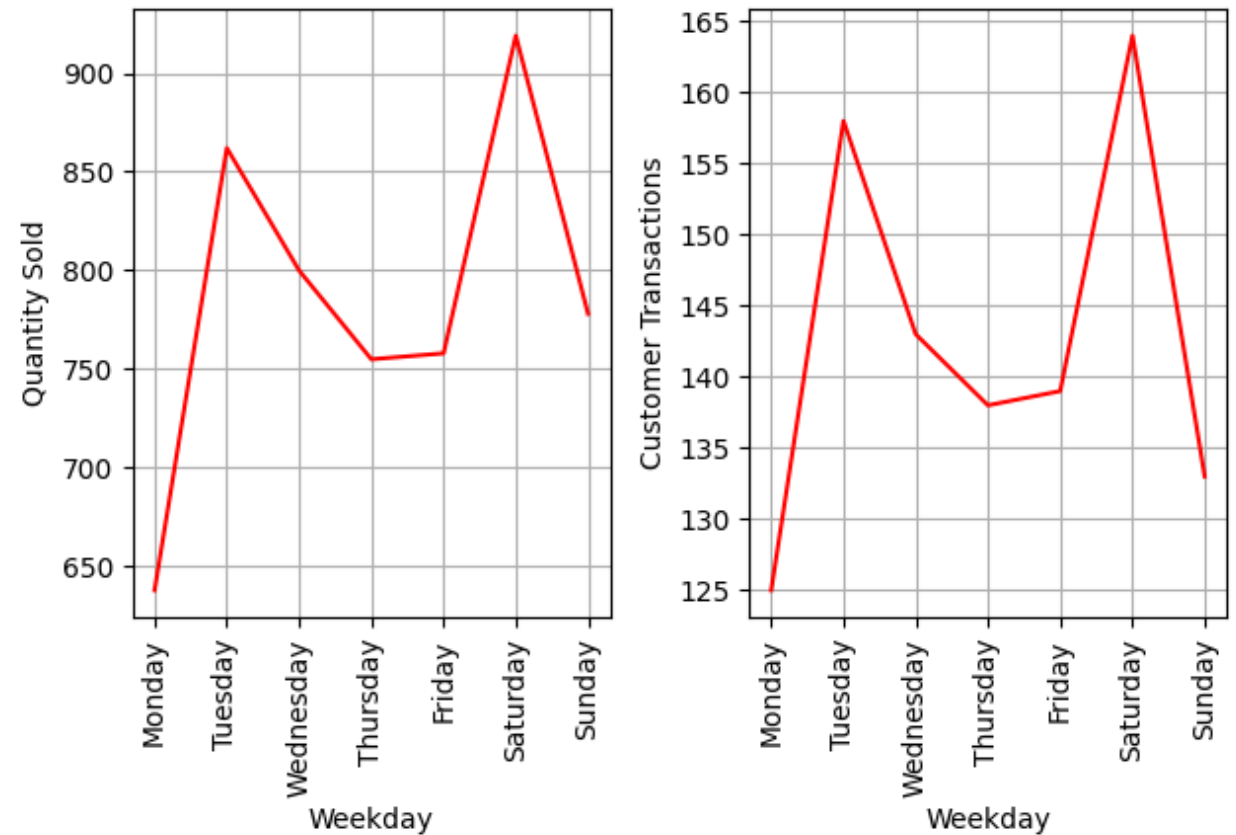

Nay Pyi Taw – Potential Success Template

- Promote the Food and Fashion product lines.
- Increase customer memberships.
- Target female customers.
- Increase staffing levels during peak shopping times to maximize transaction flow.

Busiest Days

- Highest volume of customer transactions was on Saturdays.
- Most items were sold on Saturdays.

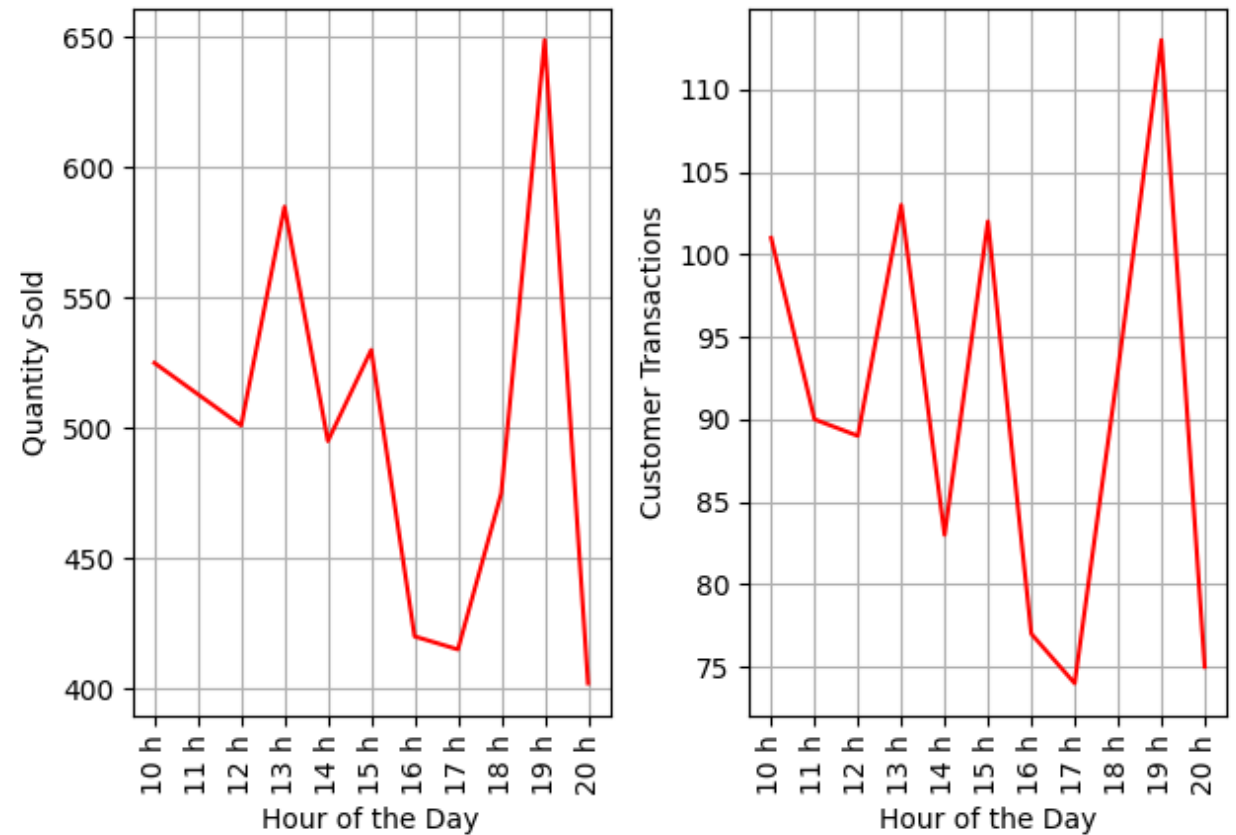

Cumulative Daily Volume

Busiest Times

- Most items were sold at 7 pm.
- Most transactions were processed at 7 pm.

Cumulative Hourly Volume

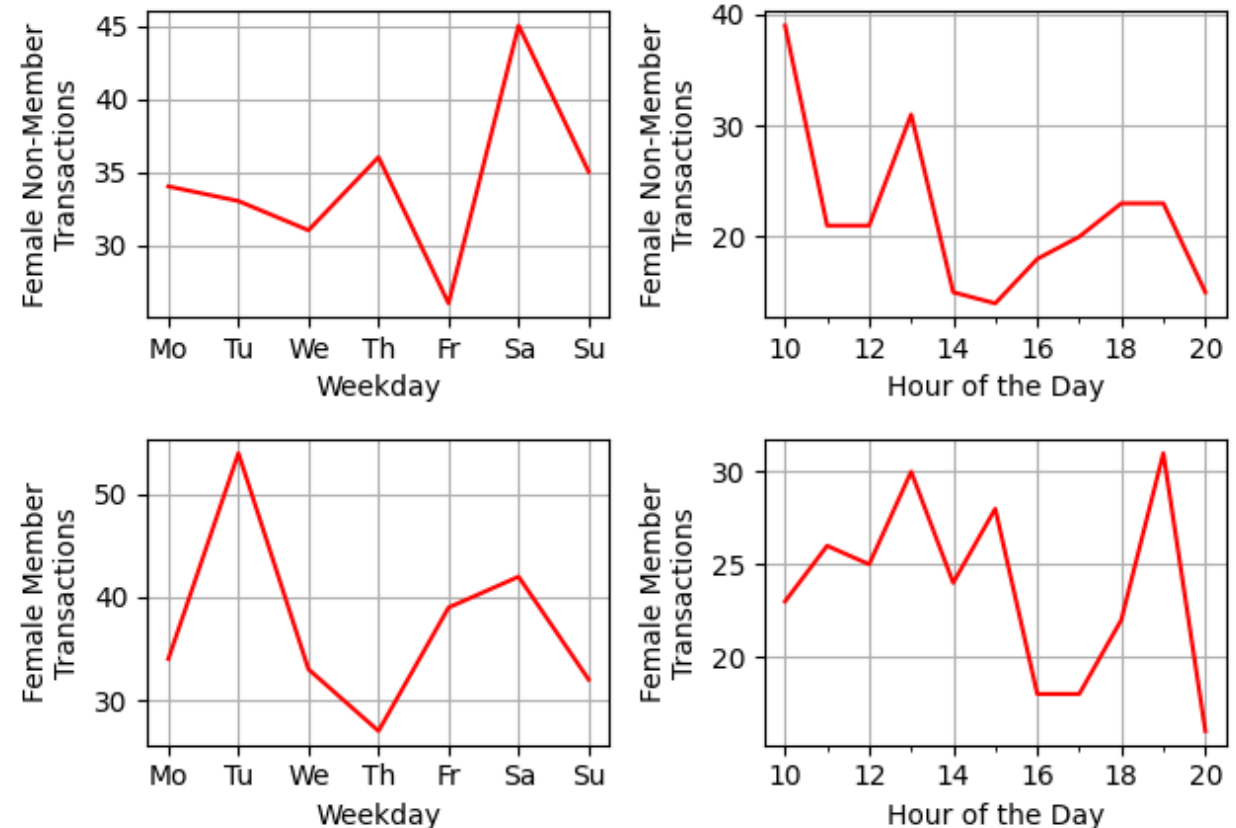

Q1 2020 – Staff Deployment Predictions

- Based on the 2019 data analysis, if customer habits do not change then the likelihood is strong that the peak shopping times will be **7 pm on Saturdays**.
- The quietest days are Mondays and Sundays, and the quietest hours are between 4 to 5pm and after 8 pm.
- Staff could be redeployed from the quieter hours to the peak hours.
- If store membership increases, particularly in female customers, the busiest day could transition to **Tuesdays**. Monitor store membership levels to stay ahead of staffing needs.

Female Habits

- Female non-members prefer to shop on Saturdays at 10 am.
- Female members prefer to shop on Tuesdays at 7 pm.
- Converting more female customers to members will likely change the busiest days to **Tuesdays** but retain the busiest times as **7 pm**.

Cumulative Female Customer Volume

Final Notes

- The sales data is very uneven and there is no notable correlation between any of it.
- There appears to be a downward trend. Running a regression model, even at high accuracy, flattens out at 11 transactions per day.
- Most of the dataset is very homogenous. 3-months is a very short time period.
